

Honoring our forest communities on a changing landscape

## INTER-TRIBAL FOREST UNDERSTORY ADAPTATION COMMUNITY WORKSHOP & DISCUSSION

Join us for a gathering of tribal staff and community members to talk about selected forest plants and how they might respond to climate-driven change.

Through this project we aim to better understand changes in forest understory plants and communities. We also aim to find ways to protect these plants and habitats so that current and future generations can continue to access and use them for mino-bimaadiziwin - a good life.
